

VACUUMS

Dust Control Vacuums

Industrial surface preparation equipment requires efficient heavy duty high volume collection of dust and debris. It is essential that the correct vacuum equipment is also used to provide a safe working environment

The SPE range of dust control vacuums provides the user with robust, powerful machines capable of controlling dust in the most demanding conditions. Powered by one, two, or three 1.3hp bypass motors, all units are suitable for general cleaning work when fitted with different floor tools.

316-3

The VAC 313-3 3 phase dust collector has been developed to work with the DFG 700 Floor Grinder and other large surface preparation equipment. The unit has a powerful 4kw electric motor and is fitted with clearflow PTFE filters to cope with high volumes of fine dust particles. An optional Hepa filter is also available. Careful consideration was given to the design process to ensure the finished machine was compact and easy to transport.

Features

- Practical drop bins for easy disposal of debris
- Wheels fitted with a brake
- External filter shaker
- Polyester star filter
- Compact, robust, and powerful

Features

- Practical drop bins for easy disposal of debris
- 16 Polyester cartridge filters
- Wet conversion kit available
- External filter shaker

Features

- Compact, robust, and powerful
- Practical drop bin for easy disposal of debris
- 32 amp take off to power additional equipment
- External filter shaker
